

Flexible and space-saving: Folding Design sliding doors allow indoor spaces to blend perfectly with outdoor areas. Maximum opening widths ensure spacious doorways without fixed vents or fixed lights. Even when closed, the large, foldable glass units and narrow profiles create a transparent connection between the inside and the outside. Folding Design sliding doors can be perfectly tailored to the requirements and desires of different users and are ideal for a wide range of different installation scenarios in the residential and commercial sectors – for anyone who wants more space to flourish. While in the private sphere they allow living spaces and terraces or gardens to become one, they impress in shops, hotels and restaurants in particular with their flat thresholds for easy access.
